

Growlush Australia has proudly announced they are the distributor for this famous brand nutrient from the US. They are available throughout the stores in Australia and NZ.

NPK Industries is a company that uses revolutionary technology to produce high quality products to use in your garden. The main difference between NPK products and other similar nutrients is how they do not implement stress in order to achieve their goal, but convince the plants that it is perfect conditions for vegetation, fruit or flowering which maximizes structure and growth.

Power Wash is the solution to remove residuals left by other plant sprays. It is effective throughout the grow and flower cycle up to and including the day of harvest.

PM Wash may be used at all stages and is especially effective when used during Harvest! PM Wash solves powdery mildew and mould problems.

"Multiply" is a brand new multi-million dollar technology from Commercial Food Crop Production! Multiply is a soil drench and may be added to any feeding program or nutrient feed schedule, every 7-10 days during the veg or grow stage. As can be seen following this link: http://www.npk-industries.com/sales_kit.php, Multiply will produce a broader structure with more tops during the veg stage. Multiply also has plant anti oxidants to help mitigate any stress or heat factors.

A common problem for plant growers are spider mites. Normally spider mites on plants can be prevented, however once mites are found they are almost impossible to exterminate. Mighty wash will destroy every mite there is and leave no residue behind. Mighty Wash is a ready-to-use proprietary formula and can be used throughout the grow and flower cycles. It is the #1 selling product in many retail outlets throughout the US and Europe.
